

Akihito Sahashi

Vancouver, BC | ak.sahashi@gmail.com | (778) 686-8712 | LinkedIn: akihito-sahashi-315569398

Software Engineer with 8+ years of experience in Japan, currently enrolled in the Information Technology Co-op program at Canadian College in Vancouver. Looking to apply my background in AWS, Python, and full-stack development in a Canadian work environment, while growing through hands-on Co-op experience and collaborating in an English-speaking team.

Education

Canadian College, Vancouver, BC, Canada Information Technology & Co-op (Diploma)	October 2025 – September 2027 (Expected)
Kobe Institute of Computing-College of Computing, Hyogo, Japan Information Technology (Diploma)	April 2014 – March 2016
Ryukoku University, Shiga, Japan Bachelor of Sociology	April 2010 – March 2014

Experience

Systema Corporation, Osaka, Japan System Engineer	April 2016 – July 2024
---	-------------------------------

- **Log monitoring system (April 2020 – July 2024)**
 - Administered a large-scale monitoring system that processed over 1 TB of logs per day on AWS EKS, used by multiple internal teams to improve system reliability and enable real-time failure detection.
 - Maintained and enhanced admin and user-facing web applications (Node.js, Vue.js), improving usability and supporting monitoring workflows.
 - Redesigned and rebuilt the log monitoring platform using Python (FastAPI, Pandas) and AWS services, projected to reduce infrastructure costs by up to 50% and simplify system architecture for improved maintainability.
 - Created technical documentation and user manuals, and provided technical support to 10 user administrators and 100+ end users, improving onboarding efficiency and system adoption.
- **Gut health web service (December 2019 – March 2020)**
 - Developed a web application using Node.js (Express) and PostgreSQL to deliver personalized health insights based on examination kit data.
- **Fall-detection system (April 2019 – November 2019)**
 - Developed a fall-detection and notification system with C++ and camera monitoring, improving safety by enabling real-time detection and alerts on station platforms.
- **Communication robot (February 2018 – March 2019)**
 - Developed an interactive robot using C/C++ and embedded hardware (motors, sensors, camera), implementing movement patterns, collision avoidance, and person detection to support children's social learning.
- **Wayfinding signage (November 2017 – January 2018)**
 - Developed a wayfinding web application displayed on digital signage alongside a humanoid robot, using HTML, CSS, and JavaScript, enabling tourists to search nearby landmarks and routes.
- **Route search chatbot (September 2017 – October 2017)**
 - Developed a chatbot on a messaging platform using PHP on Heroku, enabling users to search for landmark routes via chat.

Skills

Languages: Python, JavaScript, Java, Go, C/C++, PHP

Frameworks: FastAPI, Node.js (Express), Vue.js, Spring Boot

Cloud & DevOps: AWS (Lambda, S3, DynamoDB, EC2, CloudWatch), Kubernetes, Docker

Databases: PostgreSQL, MySQL, SQL Server

Tools: Git, Grafana, Graylog, Elasticsearch, Logstash, Fluent Bit

Spoken Languages: Japanese (Native), English (IELTS General: Overall 6.0, Jul 2025)
